

Britain Has Tremendous Problem In Control And Distribution Of Food

The reason that the British Ministry of Food asks to deal with a country when they begin to run out of supplies is because it must buy in large and assured volume. Dr. William Albert, Agricultural Commissioner, Marketing Service, Dominion Department, Agriculture, stated at the Conference called by the Agricultural Supply Board, which was held in Ottawa, July 18-20.

This policy is necessary because the normal distribution of food is both imported and home produced in a tremendous problem and the tendency is for that control to become even more intensified. This has meant a vast reorganization of the means of handling all food products.

The difficulties of the British Ministry have been increased by the problem of shipping under war conditions. Shipping dates are not made known in advance and the time of monthly arrivals are irregular. Of ships unless their cargoes at ports where harbor facilities are inadequate and remote from points of sale, the producer is left with no general distribution.

When referred to the great influx in population which has been made, then further increasing the difficulty of distribution. Transportation in the United Kingdom is handicapped by the black-out, which the work of the Ministry has to be done at night and in the dark. This, interfering with the flow of goods, is a matter which cannot be realized here in Canada.

While the British Ministry of Food has control over both imported and home produced food, it is subject to the right regulations of the Treasury. The Treasury rules that no money can be paid.

He pointed out that paying for food is a comparatively simple matter, but it is all within the Treasury for there is no problem of foreign exchange. As far as the Ministry of Food is concerned, there is an adverse balance of trade against the British because of a shortage of wheat bought from the United States.

The Discomforts Of War
Are One English People Do
And Can Explain About
W. L. Clark, in the Windsor Star, says:

...the name of England. Here, William W. Mathers, wife of Captain Mathers of London, Ontario, has made with her soldier husband, Bhs.

The English people amaze me. They grumble continually about it, but they never seem to get used to it. And it is cold. I've never been in cold in my life and for the matter, I had it in cold weather clothing. You can't get warm hovering over a fireplace with the rain of the house freezing. They grumble about the heating equipment, or about the lack of it, though they grumble about it. But about the discomforts and dangers and necessities of war, they are nothing but the most cheerful folk. I never heard of a complaint about anything, and it is a surprising discovery. They do complain, but, I have English. The men are in every way better off than we are without any fear whatever regarding the dear result of the war. It is the name of England. They are complaining about the cold and making no effort to improve on the war. They are not complaining about the war. When they think of the war, they are determined to see it through to victory.

Arms Production
Men Withdrawn From Arms In Britain To Speed War
There will be no slackening in the work of men and women engaged in the manufacturing of arms in Britain, the British Broadcasting Corporation reported.

Arms production is so urgent that many thousands of skilled workers are being withdrawn from the front lines to return to their trades. This is in the Ministry of Labour's plan to bring many of Britain's arm factories into full production, as well as possible, to men and women of existing ones.

There has been an effort without parallel in the history of the United States to have manufacturing industry in Britain. The B.B.C. said. Aircraft, tanks, guns and trucks have reached an output impossible a few months ago.

Refugees Get Clothing
Three shiploads of food and clothing for the French refugees are being sent from the United States, which were in route from the U.S. to France and were met by the British Broadcasting Corporation reported.

The Baghdad railway line, linking Turkey and Iraq and making it possible to pass time to the Persian Gulf, has now been released to Turkey and Baghdad. In London, seven days, have been completed.

Toy Factories In Britain

Are They Getting Shipments Ready For Export To America?

Quint Macdonald, in the New York Sun, says: While German planes were increasing the attacks on British out-bound convoys, war correspondents were taken on a tour of a British toy factory to see how the war work in which girls were making dolls, clock-work toys and tin soldiers for the export markets captured from Germany last September.

Export work is war work," declared Lord Forster, member of the Export Advisory Council. "Every one of the toys for export is made by other staff in the factory. Every worker on an export lathe is in direct touch with the war effort."

The toys I saw are for later distribution in the New York stores, many of which have placed large orders, according to Walter Lewis, chairman of the toy and fancy goods export board.

With deep air raid shelters surrounding the factory, the girls worked unconcernedly, quickly and cheerfully, doing dolls' eyes and noggins like and clocks, and working frantically at presses turning out parts which the girls' fingers will vary into girls' and boys' stockings soon Christmas.

Many of the dolls now being Canada on the seas were drawn from far inland. The bewildered young sailors emerging from the depths of an Atlantic Coast line-steamer harbor from Regina—Canadian Official Photograph, taken by Canon.

A Job To Do
Transformation Is Wrought By Wearing Of The Uniform
If you were to go to the factory where girls have been enlisted in the army or air force, you would find the girls in uniform. They are always struck by the difference between the girls in uniform and the girls in civilian clothes. The girls in uniform are always struck by the difference between the girls in uniform and the girls in civilian clothes.

The Government has recognized the importance of making the girl industry more efficient. The production of munitions. Everything that is made in the industry is for the use of the army and navy. The production of munitions. Everything that is made in the industry is for the use of the army and navy.

While we still have large reserves of gold and silver, the Government has made it clear that it is not going to use them. The Government has made it clear that it is not going to use them. The Government has made it clear that it is not going to use them.

I found it an amazing sight to see workers who are making clothing for the army and navy. They are making clothing for the army and navy. They are making clothing for the army and navy.

Russia Gets Grain
Large Percentage Of Russian Grain In Freshness Recently Acquired
